

Will we need to get our own domain with Replit first?

Apple and Google integrations. We already have this with our existing storefront. Unsure what we'll need to do to change it to this one - and we may be okay to take the other down and put this one up as we don't have people using it every day (at this moment)

We have integration with **Stripe** but will need to set it up for the new system.

Order Desk integration.

We als need to do something at some point with taxes for other countries.

We provide unique link to artist. Fan comes here to see the package (a pop-up of an image and what's included). They click on Buy Now.

Fan is taken to sign in with GoodTunes. We want to allow them a frictionless path. One issue we've discovered is apple's private relay blocks us from communicating with fans (not good for vinyl orders and shipping)

We've also had issues with people who rushed to create an account and when they try to login again they use their email in our email password boxes and the are told there's no account. But, they used "Continue with Google /Apple" to create their account. How can we message to check those choices (vs. emailing and being frustrated). So, even if they use Apple or Google sign in we may want to capture their email address or phone.

We use an integration with Stripe for purchasing. We will have a flat fees for fulfillment and add \$1 in to shipping costs to give us room to grow.

We will need reporting for order status and also to notify the artists who has purchased (data through stripe) and where they are in the world and their contact info (which can also be downloaded) and how much they have earned.

Fans get immediate access to the music and bonus content like images and video to listen to and view. We want them to be able to download their music in the app. But, not download from the desktop.

However, if someone wants to download the files we can let them do so. They will be restricted until the "street date" in some cases (a few weeks or so) then they can do it.

But, we want to put a caveat to let the know that if they download outside the app (and we'll know) then they are unable to ever sell the item on our marketplace.

We're manufacturer agnostic and we have four vinyl manufacturers who are excited to work with us and even send artists our way. We will work with each manufacturer by providing them with the files that are needed in their templates (we would like to have AI build these templates from assets that we supply from the client. We will need to learn if they are the proper color (CMYK in most cases, sizing with bleeds and more). We will also send audio files to the printer (but if we have them in our system we can just send them a link or if they have access they can go in and hit download.

Side note, would love to have artists say how much they think they will sell upfront. Then, see how many they actually sold, and if they then increased their order to the manufacturer.

Spinney Media and other potential fulfillment centers will receive the delivery from the manufacturer we will get some for ourselves, and the artist/label may increase an order for merch or to have Spinney or others fulfill over time.

SuperCredits

This is where we have the credits of each person that contributed to the album. We might be able to have an API with [muso.ai](#) and populate based on feeding a list from the artist into our system.

But, we would add the ability for each artist to send us their gear or we would add it. We would pull this from APIs with **gear manufacturers** or just scrape to demo to them and we would have options of local **retailers** who people could buy it from. We would create a profile for the vendor, retailer, artist, etc. Plus the artist could speak to the sub-gear. For example if it's a Martin guitar, but they use Ball strings or a specific capo or box. The idea, how did you get the sound for a specific track. Was it special tuning or is it how you always do it.

Artists/Engineers, etc. would receive an affiliate fee for anybody who went to the the

Community

We want to enable fans to be able to create things like

Musical notes: Notes about a certain song or album and how it made you feel, why you love it and this can be shared with the world - or friends only or just your own notes.

Borrowing: We could allow fans to borrow my early copy of an album to listen to or at any time if it's not on streaming or has cool bonus stuff and It's just like a owned album, if they have it, I can't play it. There could be come component for payment where someone could buy a digital copy (if any are available) if they like it. BUT, someone could buy multiple copies. Keep one for themselves and the others they could lend to their friends. But, lending has to be slow like it is to do it physically Like maybe the rule is no more than one person a week and not the same person twice in a row. Basically to prevent something that might be hot from being listened to by tons of people for one purchase. We'll figure it out. Because if you own things you should own them.

Personal Billboard Chart - you can see what your friends care enough to own. Same with the world. See your friends collections and your compatibility.

Gearfinder - could be a way that if you're looking for a specific type of instrument you could search (subscription) and see who owns it and if you could borrow or buy (lets say your a musician and your equipment is stolen and you have a gig in Az - you might be able to put the band together until you can get your other stuff if the community assists.

The Marketplace

We want the ability for people to sell their digital goods (that have never been downloaded to a desktop / loose files) and only in the app to be able to sell to other people. Because these will have the provenance of who owns it, and the GoodDeed® Certificate that is personalized (name) and provides the number in a PDF suitable for printing the new owner could have the number 10 or 40 or whatever and have bragging rights.

There will be a transfer fee of 14.29% (I believe) from the seller. The number time 70% equals 10% of the sales price to go to the rights holders. With a minimum fee of \$1.50 going to them (their 70% - we get 30%) if it is under \$15 on the transfer. Every time it transfers, forever.

We also want to build a community that's music focused and artists can post their new gear (and fans can check out where they got it from and maybe buy - giving small affiliate revenue to the artist and us 70/30

For Charity and Vendors I believe they'll have an opportunity to reach niche audiences who were never “worthwhile” before. But, we'll make it easy for them to see who's supporting them and charities and vendors can drive their audience to the artist to help drive awareness, and get more sales for themselves and the charity who will earn put up to \$1 each with \$0 out of the artists pocket

We need a place for us to build the offerings digital and physical and track everything.

Multi-permissions for artsits and others

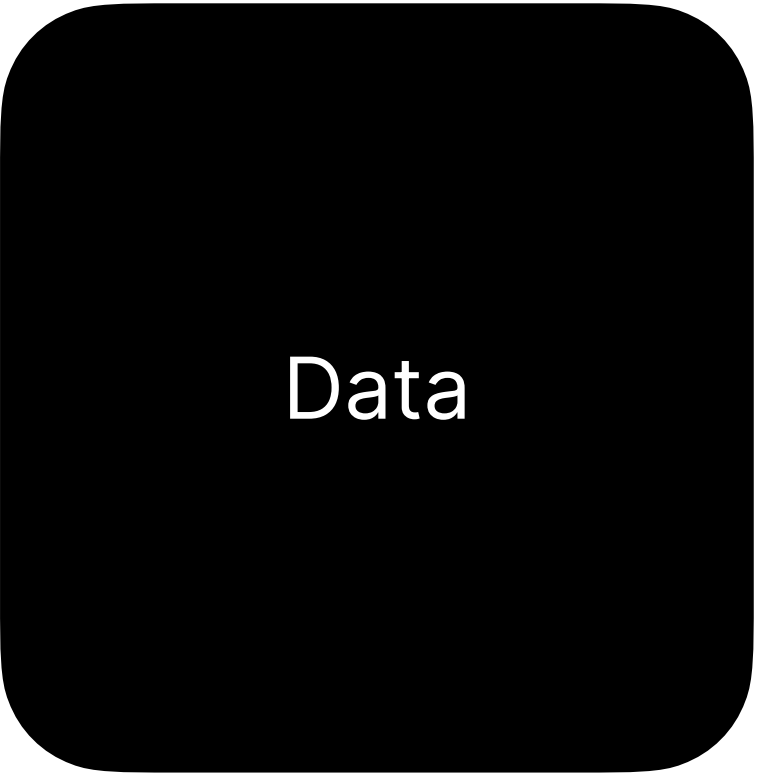

Some artists and Labels want to do it all themselves. But, we offer a uniqueness with our digital player and good deed where with a Shopify integration they could upload their digital content to us and be able to offer it for sale as part of what they are selling. Unlike other products (downloads) which don't release until street date, fans could get instant access to our free player and get the good deed certificate (and possibly signed).

We could offer this for like \$3.5 per unit sold and the cost of the good deed being printed (we'd ship to them and they would sign and fulfill)

We will donate up to \$1 for a charity of choice by any artist. We could create charity profiles to associate them with an artist and/or for artists to learn where there might be a good fit.

Clicks to help artists know which track is the most popurl before they release to streaming - or they queue it up for their next release

Who are the influencers. Did someone come to my personal account and then buy an album they previewed (because they can't listen to the whole thing unless they buy it (or I share it)

The band/artist could reward people who may not even know they are the number one fans.

Where are most of my superfans located for my decision with shows and more.
